

Task Management API - Stage 0: Hello Server

Overview

This repository contains a lightweight RESTful Task Management API built using Node.js and Express as part of the FlyRank Internship Backend Engineering Track (Week 2).

Stage 0 establishes the core HTTP server daemon listening on TCP port 3000 and verifies the request-response lifecycle using raw terminal HTTP inspection tools.

Technical Stack

- **Runtime Environment:** Node.js (v24.x)
- **Framework:** Express.js
- **Protocol:** HTTP/1.1
- **Version Control:** Git (Scoped local user identity)

Directory & Environment Setup

1. Workspace Navigation:

Navigate into the designated project workspace:

```
cd "C:\Users\ernes\Documents\Ernest Career\Training\FlyRank Internship\Week2\BackEnd Engineering\Build your first CRUD API\NodeJS"
```

2. Dependency Initialization:

Initialize the Node project manifest and install Express:

```
npm init -y  
npm install express
```

Execution & Daemon Lifecycle

To start the HTTP server daemon in the foreground:

```
node server.js
```

Expected Console Output:

Server is running and listening on http://localhost:3000

Verification & Protocol Inspection

To verify the server routing rules and verify status codes, open a secondary shell prompt and execute a raw curl request with HTTP header inspection enabled (-i):

```
curl -i http://localhost:3000/
```

Raw HTTP Response Output:

```
HTTP/1.1 200 OK
X-Powered-By: Express
Content-Type: text/html; charset=utf-8
Content-Length: 12
ETag: W/"c-Lve95gjOVATpfV8EL5X4nxwjKHE"
Date: Wed, 22 Jul 2026 00:50:46 GMT
Connection: keep-alive
Keep-Alive: timeout=5
```

```
Hello World!
```

Local Repository Identity Configuration

To isolate commits for FlyRank without overriding global development settings:

```
git init
git config user.name "ernestmwangombe"
git config user.email "ernest.mwangombe@10x.ai"
git add .
git commit -m "Stage 0: hello server"
```
